## **EDUCATION**

University of British Columbia | Vancouver, BC

Bachelor of Science: Double Major in Computer Science and Statistics | May, 2020

## **LANGUAGES & SKILLS**

Primary: Javascript (React/Redux/React Native and NodeJS), Typescript, HTML, CSS, C#, SQL (MSSQL), Git,

Jira, Rally, Trello, Agile

Secondary: Meteor, Express, MongoDB, TestCafe, AWS, Github Actions

## **EXPERIENCE**

D2L Corporation | Software Developer 2 | Remote | Nov 2021 - Current

- Led critical sections for the longstanding and highly requested automatic quiz submission feature from start to
  finish, which involved integration between both the instructor and student views and upkeep of backwards
  compatibility with legacy code. Since launch there has been an average of 2 million quiz attempts per week
  that uses this feature.
- Supported and triaged quizzing related customer escalations on production to ensure SLAs of 99.9% uptime and tiered response times (ranging from 24 hours to 3 days) are prioritized and met accordingly.
- Researched, created schemas, and wrote tests for an events-based system that generates quiz datasets for schools to analyze.
- Updated database model and schemas related to the quizzing tool's time limit settings and performed the
  necessary migration steps on production to streamline the process for instructors to set time limits, which also
  sets up for new features like automatic quiz submission and synchronization of start and end times across all
  students taking a quiz that affects more than 3.2 million students.
- Wrote an integration that posts build numbers to Github PRs and Rally stories automatically during deployment phase, which saved the organization more than 86.75 work hours per month in manually tracking builds.
- Built multiple web components and APIs for the new quiz editing experience on top of existing legacy code using C#, Lit/Lit 2.0, JavaScript, XML, and MSSQL.

Luniu Mall | Software Developer | Richmond, BC | May 2021 - Nov 2021

- Worked with a small team of 2-3 people on an Online Grocery Delivery app for iOS, Android, and Mobile Web Browsers.
- Designed and implemented numerous features on my own such as User Reviews, User Posts, and Points Rewards System for the app, which is currently being used by 10k+ users.
- Utilized React Native, Typescript, Expo, Android Studio, and XCode to produce apps for all mobile platforms.

BC Federation of Francophones | Junior Application Developer (Contract) | Remote | Feb 2021 - Apr 2021

- Built a Trivia Mobile Game for the Francophone community in BC using Unity, Strapi, and PostgresQL.
- Created a backend RESTful API using Strapi, setup a PostgreSQL database, and built a "Wizard" application in React JS for non-technical employees to add trivia questions to the database.

UBC LFS Learning Centre | Assistant Software Developer (Co-op) | Vancouver | Apr 2019 - Dec 2019

- Developed a Qualtrics API planned to be used to integrate course surveys into the UBC online systems.
- Wrote unit tests for Lab Certification Tracker software.
- Designed and implemented Front End for Teacher Assistant Application program using React JS.
