Austin Kwok

Software Engineer – Conversational AI
Email: austin.kwok@pm.me | LinkedIn: linkedin.com/in/austin-kwok | Website: austin-kwok.netlify.app

SUMMARY

Software Engineer specializing in AI-powered, customer-facing systems at scale. Proven track record of shipping LLM-driven features to production, designing high-throughput workflows, and maintaining reliability in distributed systems serving millions of users. Experienced in full-stack ownership, production incident response, and building resilient infrastructure for high-availability environments.

EXPERIENCE

Glia | Software Engineer IV | Remote **August 2025 – Present**

- Built and shipped outbound calling capabilities for Glia Virtual Assistants, integrating customer context and workflow selection across services to enable AI-powered outbound customer interactions.
- Led production rollout of bulk AI content generation, engineering batching and rate-limit resilience to support high-throughput customer workflows without service degradation.
- Shipped LLM-powered short name generation across core user workflows, increasing feature adoption by 25% and reducing friction in high-frequency customer actions for over 10,000 active users.
- Introduced Playwright-based end-to-end testing with deterministic database migration and seeding, increasing confidence in complex, multi-step customer workflows.

D2L Corporation | Software Engineer 2 | Remote **Oct 2021 – June 2025**

- Led critical sections for the longstanding and highly requested automatic quiz submission feature from start to finish, which involved integration between both the instructor and student views and upkeep of backwards compatibility with legacy code. Since launch there has been an average of 7 million quiz attempts per week that uses this feature.
- Led the development of an Analytics Builder tool integrated with AWS QuickSight, enabling non-technical users to create custom data visualizations through a no-code interface and generative AI, now used by 100,000+ users.
- Updated database model and schemas and wrote the necessary production database migration scripts to streamline the process for instructors to set time limits in the quizzing tool and enable synchronization of start and end times across all students taking a quiz, affecting more than 3.2 million students on a regular basis.

Luniu Mall | Software Engineer | Richmond, BC **May 2021 – Oct 2021**

- Worked with a small team of 2-3 people on a grocery delivery mobile app called Luniu Mall on both Apple iOS and Google Android: https://luniumall.com/app
- Designed and implemented numerous full stack features from scratch such as user reviews, user posts, and points rewards system for the app, which is currently being used by more than 10,000 users.
- Improved load time on the product reviews page by 5 seconds through render optimizations made to the list component and implementing infinite scroll.

LANGUAGES & SKILLS

Javascript (React/Redux/React Native and NodeJS), Typescript, HTML, CSS, C#, .NET, SQL, Microsoft SQL Server, PostgreSQL, Git, Github, Amazon AWS, Jira, Trello, Agile

EDUCATION

University of British Columbia | Vancouver, BC
Bachelor of Science: Double Major in Computer Science and Statistics
